CS 360

Mobile Architecture and Programming

Southern New Hampshire University

Course Description

Students will apply mobile development principles and best practices to develop mobile applications using user-centered design principles and industry standards. Upon completion of a fully functional mobile application, students will conduct security, product assuredness, and compatibility checks before launching the application.

Competency Projects

The course goals are communicated through three competency statements instead of through course outcomes. Competencies represent the knowledge and skills relevant to your field. Additionally, there is not a single final project like you may have seen in other courses. Instead, there are three smaller projects, one tied to each competency. Still, the amount of material covered, the level of difficulty, and the workload expectations are all typical for a 300-level course.

Project One (Module Three submission)

Create a mobile app development proposal for the company Mobile2App.

In this project, you will demonstrate your mastery of the following competency:

- Apply mobile application development principles and best practices in the development of a mobile application.

Project Two (Module Five submission)

Design UI for the app you proposed to the Mobile2App company.

In this project, you will demonstrate your mastery of the following competency:

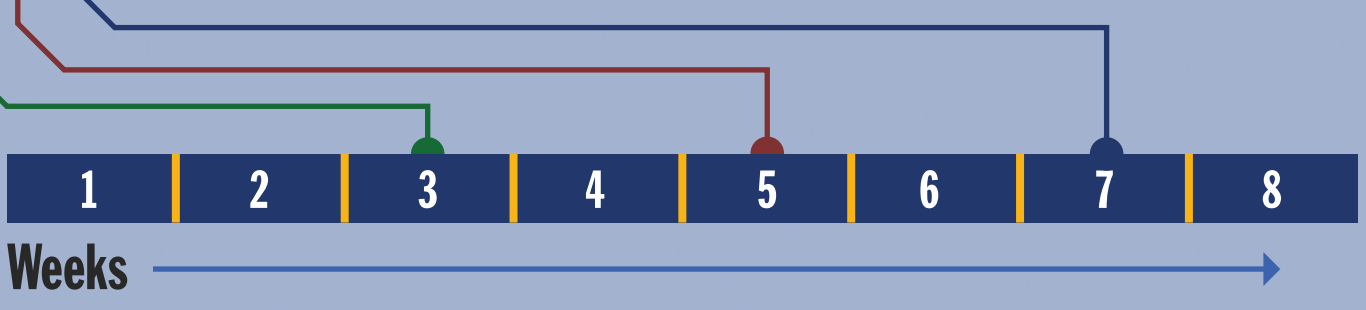

- Apply user-centered design principles and industry standards in the development of a mobile application.

Project Three (Module Seven submission)

Create code and a launch plan for the app you proposed to the Mobile2App company.

In this project, you will demonstrate your mastery of the following competency:

- Develop and launch a fully functional mobile application.
